

E5 Nano Silica Project Showcase

Four Winds Casino

“THE E5® NANO SILICA HAS BEEN EXTREMELY BENEFICIAL TO OUR CONSTRUCTION PROCESSES AT WILHELM CONSTRUCTION.”

“From internal curing to protecting the finished surface, the E5® Nano Silica has given us back our finishing ability and saved us time during the construction process. The E5® Nano Silica system is a great benefit to owners and tenants, with lower long-term maintenance cost. I would highly recommend E5® Nano Silica to anyone using concrete.”

Wightman and Associates
General Contractor
Wilhelm Construction

THE MOST EFFECTIVE INTERNAL CONCRETE CURE.

The E5® Internal Cure gave back control to the finishing crews. Despite less than desired weather conditions the slab surface remained workable and required less man power than typical jobs. E5® Internal Cure eliminate sealers, cures, moisture inhibitors and costly moisture mitigation systems. When used as a system, E5® Internal Cure and E5® Protect creates internal curing and surface protection to guard against salt intrusion and weather degradation.

Products used on the project: E5 Internal Cure, E5 Liquid Fly Ash and E5 Protect.
